MAN Truck: More motivated employees, better prepared employees

MAN Truck & Bus is one of the world's leading suppliers of industrial vehicles and transport solutions. Since 1758, its offerings have included trucks, as well as financial services, technical assistance, and after-sales services related to the operation of MAN vehicles.

In 2015, the company's Training and Development department decided to immerse itself in the world of video games with a major goal: to improve employee motivation. An initiative that involved 84 employees with different profiles and aimed at an even greater challenge: increasing staff competitiveness by relying on more motivated and engaged employees.

Défi : La formation comme pilier d'un plan stratégique

Offrir une réponse garantie aux nouveaux paradigmes du marché (la mondialisation, l'efficacité, l'optimisation des performances ou la transformation numérique) est devenu le grand défi de MAN Truck & Bus Iberia.

Pour y parvenir, la formation est devenue le pilier d'un plan stratégique divisé en trois points étroitement liés :

More motivated employees

Improvement of performance and efficiency

A more competitive workforce

"The strategy of the company has two main fields of action: improved efficiency and increased performance. And, obviously, the training plan is closely linked with the strategy of the company."

Virginia Sánchez

HR Director at MAN Truck & Bus

RESULTS

Satisfaction Ratio

Recommendation Ratio

Completion ratio

Applicability ratio

For the strategy to run smoothly, it was necessary to adjust the key element: increasing the motivation of the employees at MAN Truck & Bus.

The Human Resources and Training and Development departments are responsible for developing a program to positively influence employee motivation.

To achieve this, it was necessary to provide effective solutions to essential needs:

- ◇ Make training a real and useful tool for the employee.
- ◇ Achieve a connection between training and growth.
- ◇ Make training a collaborative experience that helps improve the work environment.
- ◇ Turn learning into a challenge, both personal and collective.

Solution: motivate by playing

To meet the established requirements, the Training and Development department has opted for the game as the ideal training solution. Thus, the serious games developed by Game Strategies have been presented as the answer to the defined needs:

- ◇ Each set of developed skills (negotiation and time management) has become a set of tools that the employee has put into practice within a secure environment, applying them in real life from day one.
- ◇ Courses in video game format (serious games) are designed and based on a powerful simulator which represents real life situations and not just related to the workplace. Thus, the training has been connected with the personal and professional success of the employee.
- ◇ The introduction of game dynamics such as rankings, badges and challenges has turned training into a challenging and engaging learning experience for the employee, who has increased their level of commitment and involvement with the training.
- ◇ The competition generated within the video game has created a feeling of belonging to a single group. As a result, we have developed social learning with feedback from the experiences of the participants.

Training costs per employee
have been reduced by a

63 %

Results: Motivation, effectiveness, applicability...

The results obtained with the training program through video games implemented by MAN Truck & Bus have been classified into two levels.

First level. Here is the main goal of the training program with overwhelming results:

Better motivated employees

Having better motivated employees translates into employees who are better prepared to face the new challenges of the market. In this section, the results of the training show a significant increase in the level of employee motivation:

- ◇ 98% of the employees who have completed the program have increased their work motivation, according to the job satisfaction survey

Second level. In this second level, the rest of indicators from the project are added:

"Somehow, the structure of the courses makes the employees get involved. Why? Because in that way, the employee wants to do the training, does the training and, most importantly, makes the most of the training."

David Almazán
Zone Trucks Commercial Director

Efficient development of the program

To achieve the goal, the efficient development of the training program has been necessary. This point has put an emphasis on minimizing the drop-out rate. Reports after the conclusion of the program confirm that:

- ◇ The completion rate of the program has exceeded 94%, notably improving the results obtained in previous experiences.

High degree of applicability

One of the requirements established by MAN Truck & Bus has focused on turning training into a really useful tool for the employee. Connecting the training with the professional and personal success of the employee has been vital to the success of the project. This is confirmed by the quality survey conducted within 90 days of completion of the course:

"Our employees are the most important asset of the company, and it is our vision and mission to provide them with the tools and the systems which, besides helping them to develop their knowledge and skills, will allow us to have an impact in an innovative, fun and efficient way on their motivation."

Luis Sagi-Vela
HR Director at MAN Truck & Bus

- ◇ 97% of the employees ensure that they apply the techniques, strategies and skills learned in their daily work and in their personal lives.

High degree of acceptance

The training experience has enjoyed a high degree of acceptance among employees of the company. The challenge of turning training into a social and challenging experience for the employee is defined by the degree of satisfaction shown by the participant.

According to surveys conducted:

- ◇ 98% of the employees who have completed the training recommend and even state that they would take the program again.
- ◇ The job satisfaction ratio, after completion of the program, has been set at 96.8%.

Optimization of training costs

Although not the initial goal sought by the Training and Development department, this training program has had a significant result for MAN Truck & Bus Iberia in the area of training costs.

On the one hand, the easy implementation of the online access platform (without additional software), and on the other hand, the e-learning nature of the training (it has only required a device with Internet access) have allowed for more than significant savings:

- ◇ Training costs per employee have been reduced by a 63% compared to the average investment in the rest of training solutions, especially classroom lessons.

This way, MAN Truck & Bus has secured an efficient 'tool' to increase the motivation of its workforce, becoming one of the first experiences worldwide to demonstrate the effectiveness of the video game in this field.

After the good results obtained by the Training and Development department of MAN Truck & Bus Iberia, work is already being done on creating a new group, formed by the Team Manager of the company (senior officials, managers, area managers and team leaders), whose aim is to promote the development of new managers in leadership skills and team management.
